

PACIFICA

A USAF Operations Staff Trainer

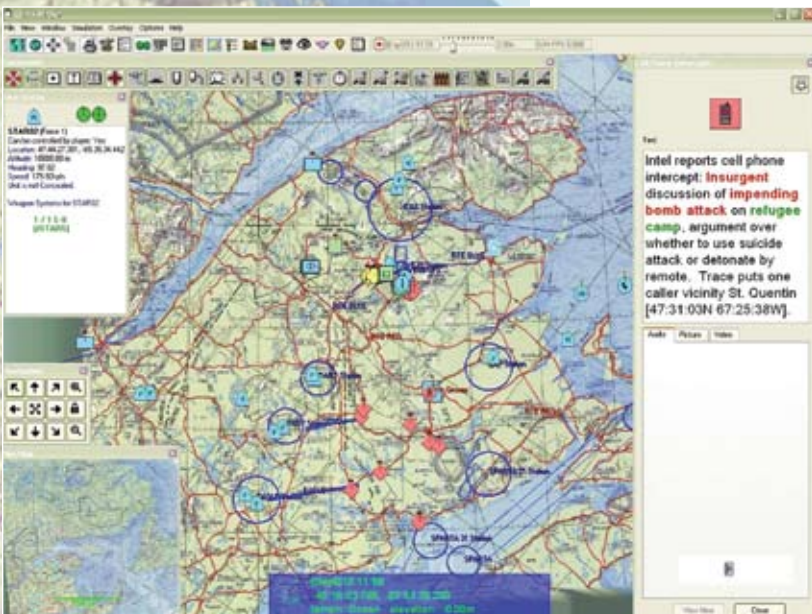

# QuickStrike

QuickStrike is an affordable, realistic, deployable simulation environment for more effective individual skill and team process training. Developed by MÄK specifically for the USAF, it accurately portrays various tactical situations, stimulating the staff interactions and the rapid decision making needed for successfully conducting mission-essential tasks. QuickStrike supports individual student training and more dynamic multi-player team training events, and is HLA compliant so it can be integrated easily with larger exercises such as those supported by the JNTC.

QuickStrike is currently being fielded to every Air Support Operations Center organization worldwide, providing each unit with an organic training capability. ASOC units will soon have the hardware and software to build and conduct their own realistic training events based on each unit's unique personnel and mission requirements.

## FEATURES

- A realistic simulated environment for practicing key processes and decision making
- Simple scenario development
- Easy to use GUI
- Built-in event development capability (MSEL builder)
- Individual or multi-player support
- Operates on a single computer, LAN, or over the Internet
- HLA compliance enables integration with larger exercises
